

Project Profile

Client: Tamarack Resort, LLC

Tamarack is a four-season resort located on Cascade Lake in Donnelly, Idaho.

Project Scope:

TORF Environmental Management (TEM) was retained to urgently respond to a diesel oil spill from a partially-buried storage tank at the Client's remote site.

Challenges: Since vandalism caused the spill, cleanup needed to exceed standards and guard against potential recurrence.

Work Product: TEM provided on-scene direction and oversight of cleanup and recommended a number of precautionary policies and actions. TEM provided guidance relocating this construction contractor petroleum tank, relocating Tamarack Resort's gasoline and diesel vehicle refueling operations, and auditing petroleum secondary containment for compliance.

Value Added: TEM's success leading response, cleanup and public communications during emergencies helped Tamarack Resort promote their concern and actions for cleanup to the public.
